BUILD Architecture Awards

Hi Roberto

I hope that this email finds you and your loved ones in the best of health.

The recent weeks and months have brought about significant challenges to businesses across the globe, therefore, I am delighted to be reaching out with fantastic news!

Throughout the past couple of weeks, our judging team have assessed the shortlist for **BUILD's Sixth Annual Architecture Awards** and it is my absolute pleasure to confirm that STUDIO ASSOCIATO CIATI has been successful and awarded:

Most Innovative Architecture Studio 2020 - Emilia-Romagna
Best Contemporary Residential Architecture Project (Emilia-Romagna): Villa Monofamiliare

Most Innovative Architecture Studio 2020 - Emilia-Romagna & Best Contemporary Residential Architecture Project (Emilia-Romagna): Villa Monofamiliare

The world of architecture is constantly changing, with new trends, patterns and ideas taking hold at an ever-increasing rate. Few understand this better than the team behind Studio Associato Ciati. Their incredible talent has allowed them to participate in many projects across the country, transforming the way in which the urban, architectural and structural design sector works. We take a closer look to discover more in this special issue of BUILD.

For several years, Studio Ciati has been a figurehead in the design and construction management of high energy saving buildings. Made up of three talented individuals, Architect Roberto Ciati, Architect Roberta Stocchetti and Engineer Franco Ciati, the firm has been able to make extraordinary strides in the field.

Few could argue with the team's enviable results, as they have worked across industries producing new civil and industrial buildings as well as recovering and repurposing existing assets. The studio has gained a strong reputation for excellence, which has allowed it to take up any role across the construction process. From initial concept to final sign off, the team are crucial team members who will ensure that a project is completed to a high standard.

The focus of Studio Ciati has shifted over the years, adapting to suit the varying trends of the industry and the needs of clients. As the team work with individuals, businesses and real estate companies, these requirements can vary wildly. At the heart of every decision the company makes, however, is a desire to promote sustainable architecture, the high quality of buildings and interiors and general comfort. This means that the team have had to put in a great deal of effort with regards to current issues, energy saving and new technologies, adopting an interdisciplinary approach to the field of architecture.

Recently, the team has seen a change in the way that people want to see their housing. The challenge now is to construct as many efficient NZEB buildings with almost zero consumption as soon as possible. It's a big ask, even for experienced teams like that at Studio Ciati, but one which could make an enormous difference to the way we see the world. The art of high energy performance has meant that every company has had to study sustainable building development, setting energy efficiency, living comfort and respect for the environment as clear objectives for success.

The approach of the team at Studio Ciati is one which promotes competence in everything. From this baseline, greatness can emerge. Over the years, the team have been able to perfect their

knowledge in the field of natural and biocompatible architecture, paying specific attention to the relationship between man and his environment. These skills are easily transferred between projects, and play a vital role whether the team is restoring a beautiful old house or creating a new innovative location.

As the studio moves forward, the aim of promoting new and exciting forms of architecture remains at the forefront of the team's minds. Their success in the field already demonstrates the impact that their sustainable, technologically savvy approach can have, allowing clients to achieve their ambitions while still protecting the environment. Staying ahead of the game is not easy. It means having to be willing to constantly adapt to meet new circumstances, but it has proven time and again to be Studio Ciati's secret to success.
